KOSSOU PERMIT

OVERVIEW

The RCZ was initially discovered during early reconnaissance of the Permit and lies within strongly altered volcanic rocks heavily cut by quartz and quartz-carbonate veins/veinlets. The Company completed 1,699 m of reverse circulation (RC) drilling in 13 holes and 15 diamond drill holes totaling 2,300 m, defining broad zones of gold mineralization, including high-grade sections, within sheared and silicified volcanic units over a strike length of 850 m.

Gold mineralisation has been confirmed in clearly defined mineralised zones to a depth of 80 m below surface. Gold in soil geochemistry indicates that this target can be traced over a strike length of 1.7 kilometers and is a prime target for continued drilling.

KEY ROAD CUT ZONE RC AND DIAMOND DRILL RESULTS

Collar Location Map – Road Cut Zone

- KRC040: 12 m at 1.49 g/t Au incl. 2 m at 4.75 g/t Au
- KRC044: 13 m at 2.10 g/t Au incl. 9 m at 2.94 g/t Au
- KRC022: 8 m at 3.18 g/t Au incl. 2 m at 8.38 g/t Au
- KDD0014: 9 m at 4.27 g/t Au
- KDD0012: 11 m at 1.71 g/t Au
- KDD0015: 6 m at 2.48 g/t Au incl. 1 m at 11.60 g/t Au
- KDD0017: 5 m at 4.30 g/t Au incl. 1.0 m at 20.00 g/t Au
- KDD0016: 2 m at 7.26 g/t Au
